

# Analiza materialelor prin difractometrie de radiatii X

## Curs 2

**Difractometrul D8 ADVANCE Bruker:  
performante si posibilitati de investigare a proprietatilor materialelor.**

- D8 ADVANCE Bruker: prezentare generala
- Instrumentatie: tuburi filtre, monocromatoare, fante, detectori
- Metode de analiza
- Prepararea probelor
- Preluarea rezultatelor

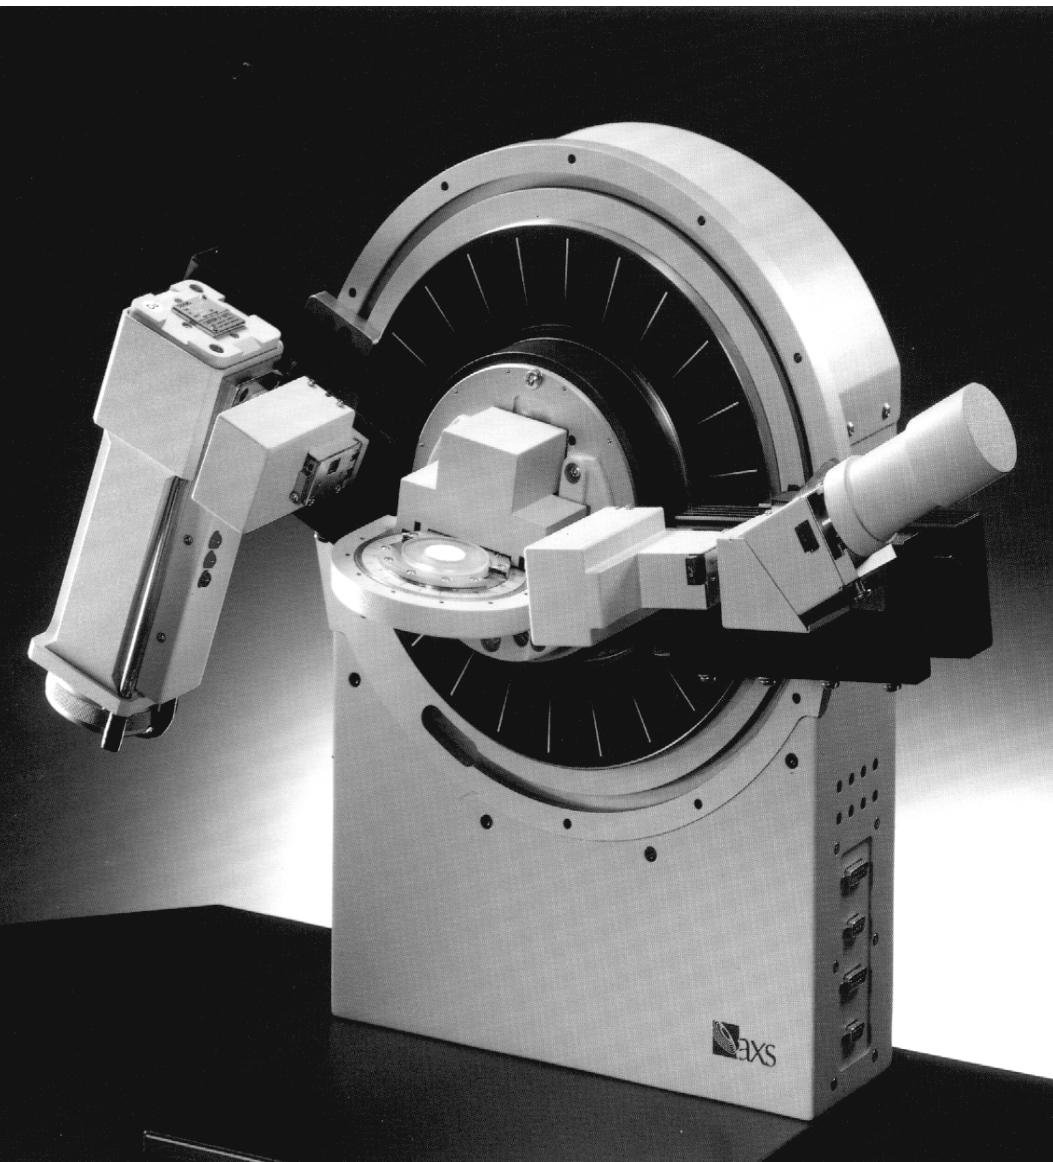

# D8 ADVANCE Bruker (1)

## D8 ADVANCE Bruker (2)

## D8 ADVANCE: Instrumentatie (1)

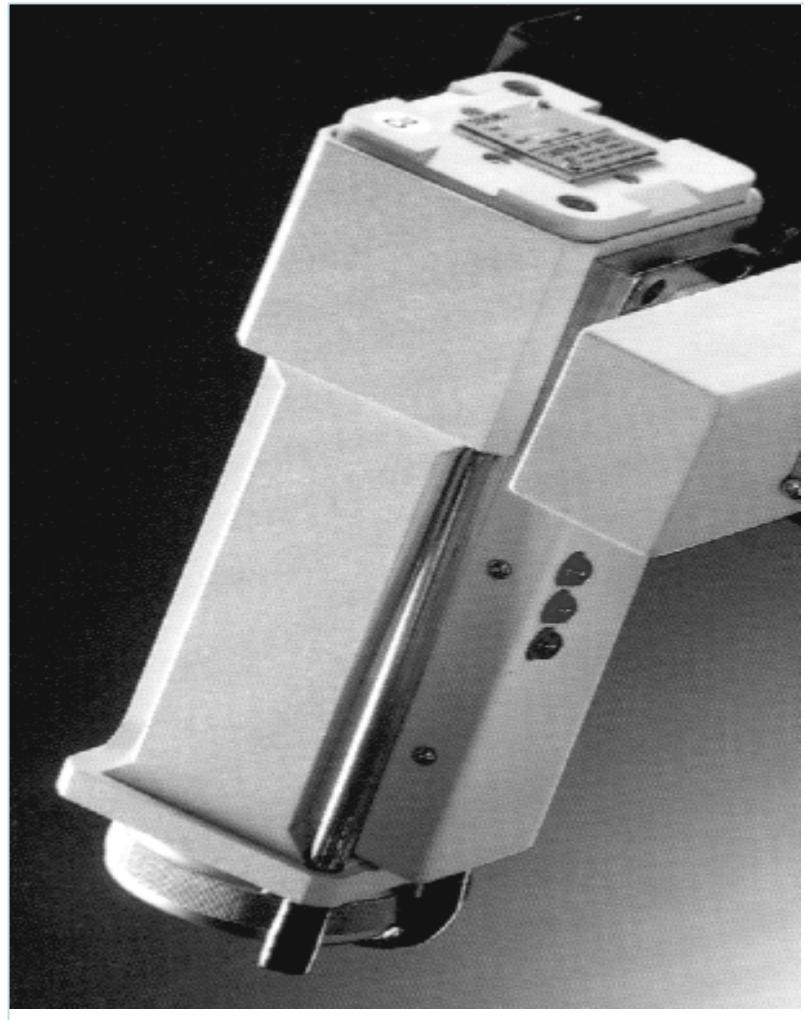

- **Radiation source**
- **Primary beam monochromator(s)**
- **Primary beam slit(s)**
- **Sample attachment**
- **Secondary beam slit(s)**
- **Secondary beam monochromator**
- **Beam tubes**
- **Detector**
- **Goniometer**
- **Electronic control unit**
- **Water supply**
- **Radiation shielding**

## D8 ADVANCE: Instrumentatie (1)

### Tubul de radiatii X:

- tip: fix, ceramic
- focalizare: long-fine
- model: Siemens KFL CU 2K
- anod: cupru
- putere 2200 W; U<60 kV; I<50 mA
- racire: apa, 5,5 l/min
- focar: 0,4×12 mm
- fascicul: 0,04×12 mm; 6°
- **timp de viata: 2000 ore**

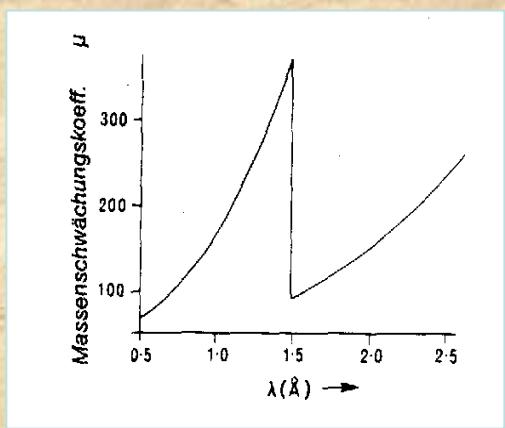

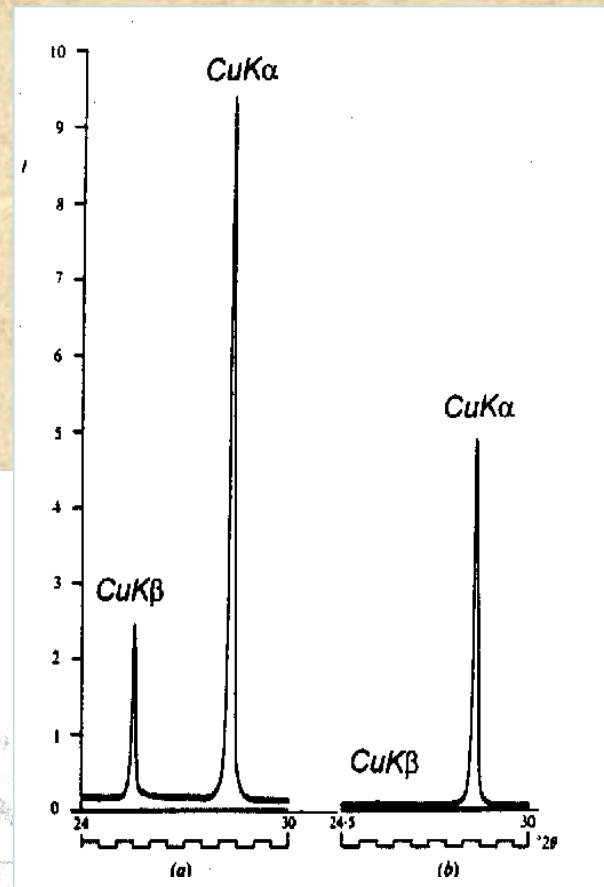

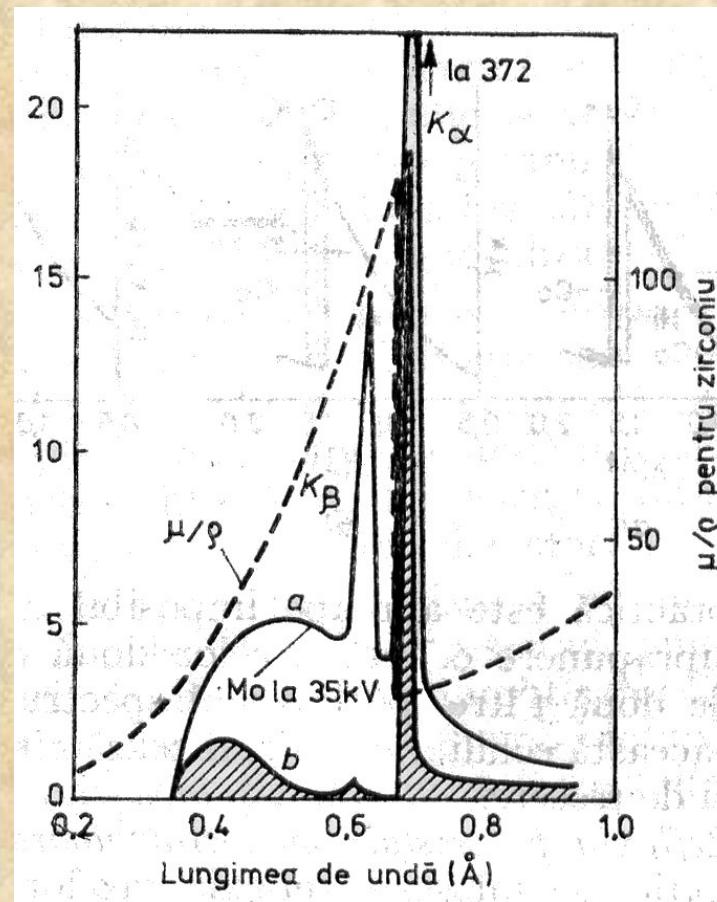

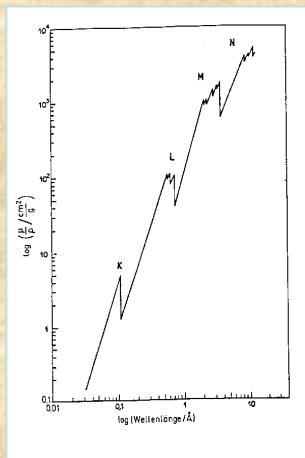

# D8 ADVANCE: Instrumentatie (2) Filtre

-radiatie Cu

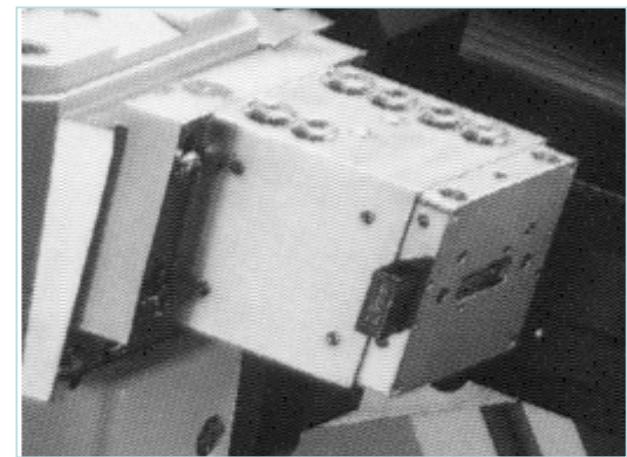

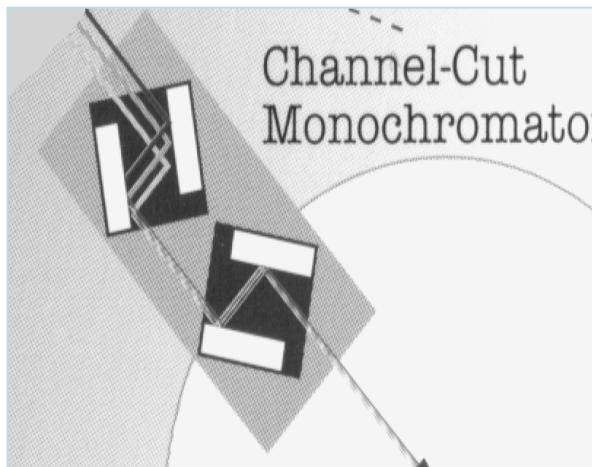

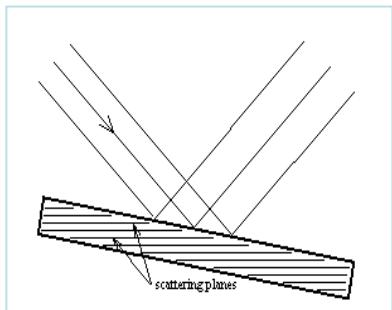

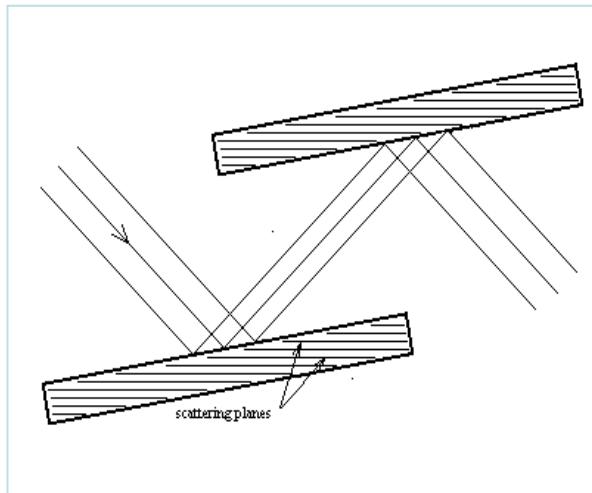

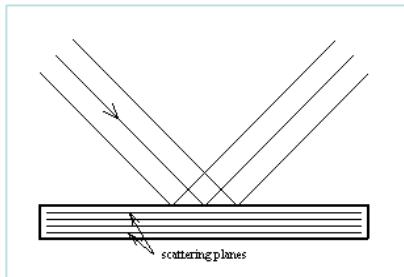

- folie 0.02 mm Ni

-  $I_{K\beta}:I_{K\alpha}$  to 0.2% (initial 16%).

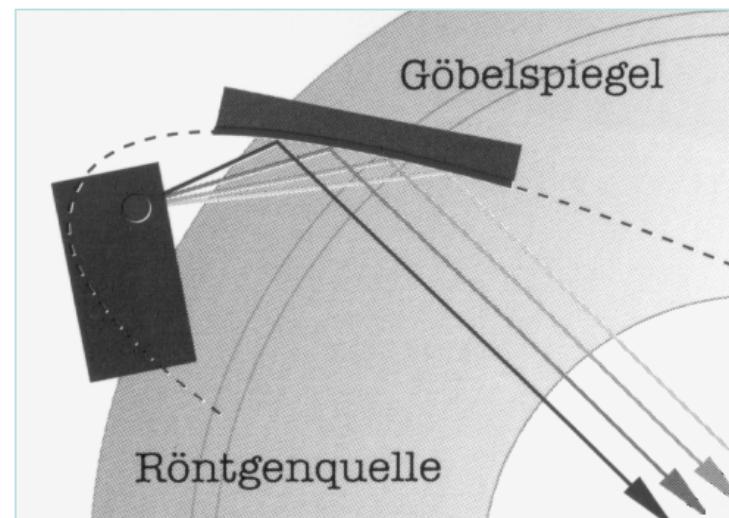

## D8 ADVANCE: Instrumentatie (4) Monocromatoare

- cresc rezolutia, scad intensitatea

Oglinda Goebel; cristal curb  
fascicul: divergent  $\Rightarrow$  paralel

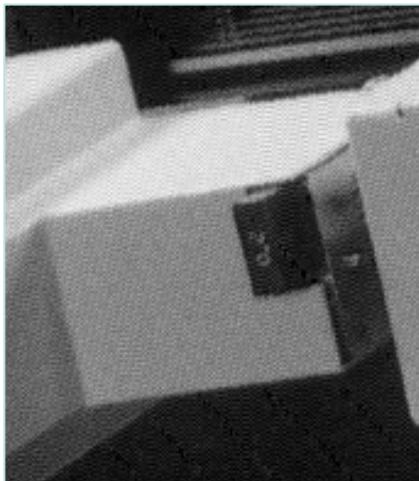

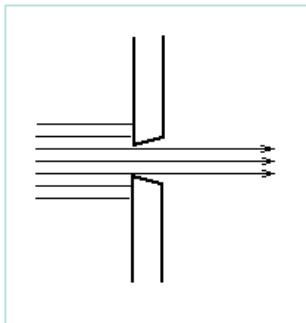

## D8 ADVANCE: Instrumentatie (5) Fante (Slits)

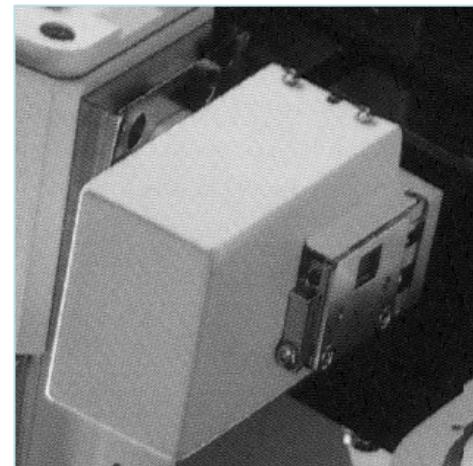

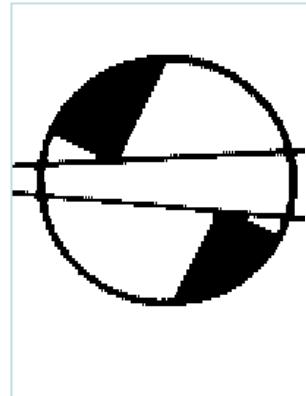

- importante in obtinerea acuratetii difractogramei in raportul rezolutie / intensitate
- soft: "vad" suprafata diferita

fixe

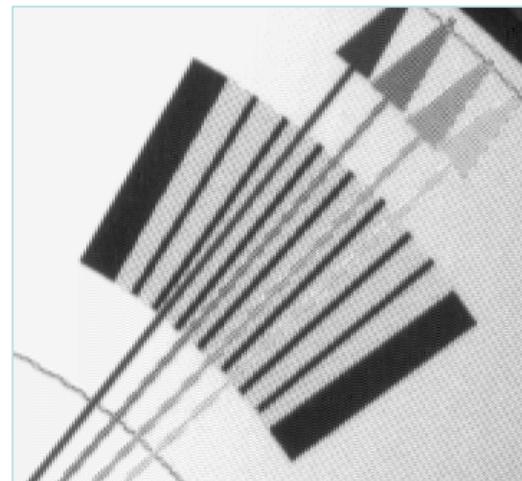

0,1; 0,2; **0,6**; 1,0; 2,0; 6,0 mm

variabile

Soller

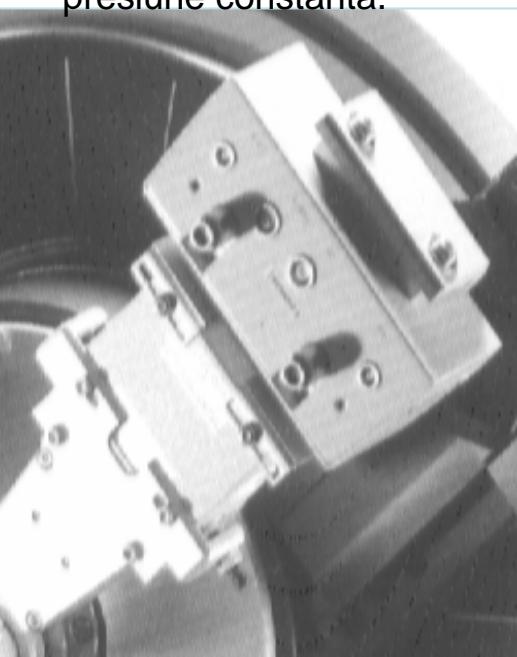

# D8 ADVANCE: Instrumentatie (6) Detectori

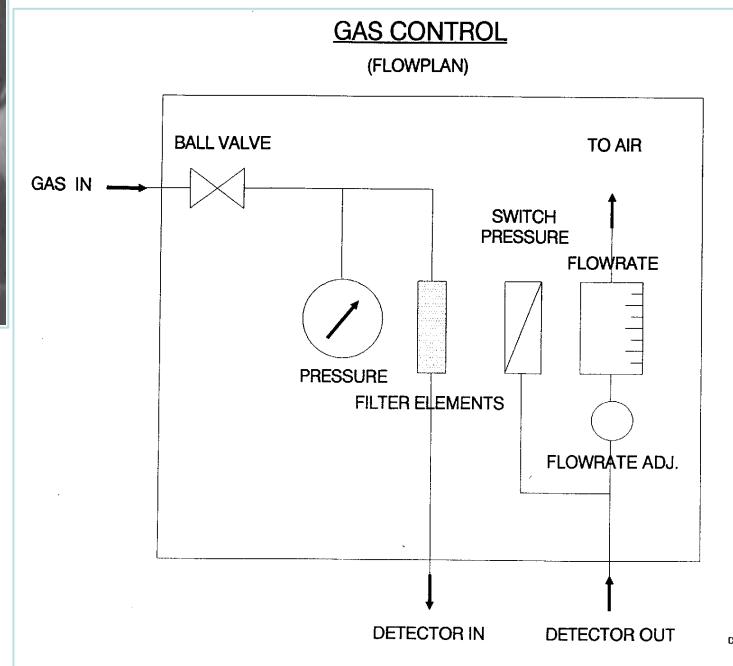

➤ importante in obtinerea acuratetii difractogramei in raportul rezolutie / viteza / timp mort

## 1D: Position Sensitive Detector

Argon (10% Methane) sau Xenon (10% Methane) intr-un sistem de curgere la presiune constanta.

timp mort mic

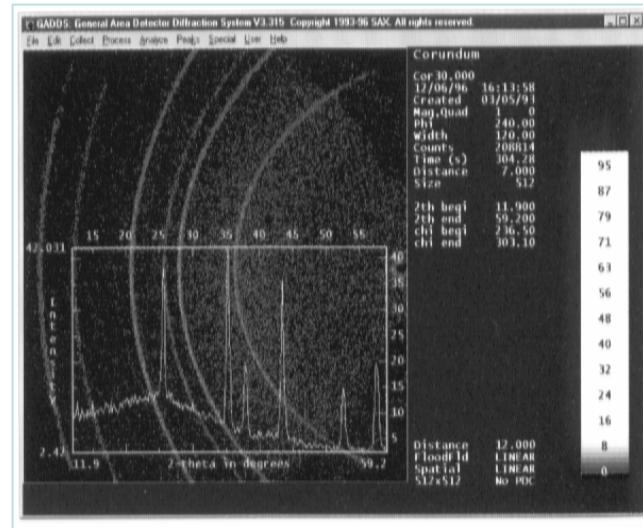

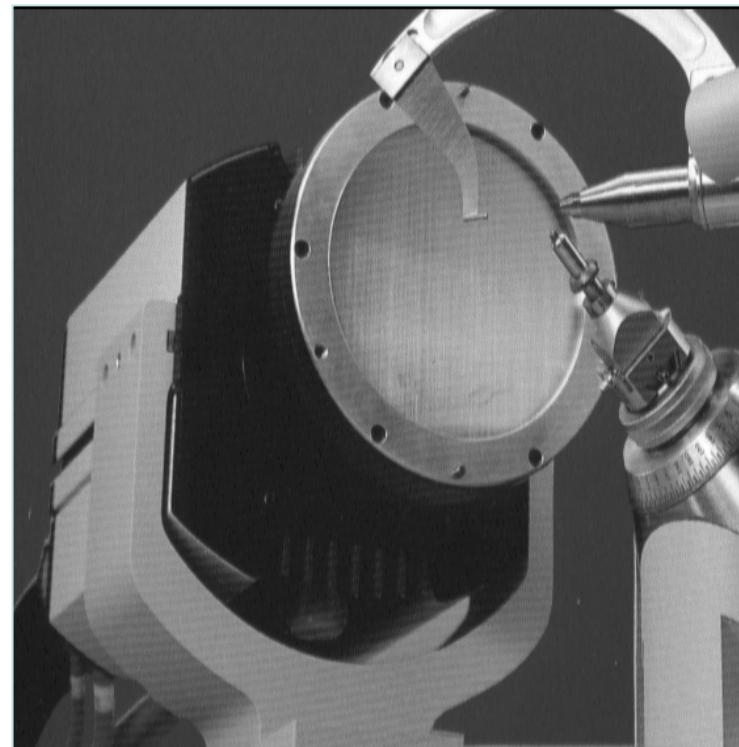

Sol-X: detector cu semiconductor monocristal de Si ultrapur sau dopat

## D8 ADVANCE: Instrumentatie (7) Detectori

**2D HiStar**  
contor proportional multifire  
soft GADDS (parametri retea)

**2D CCD**

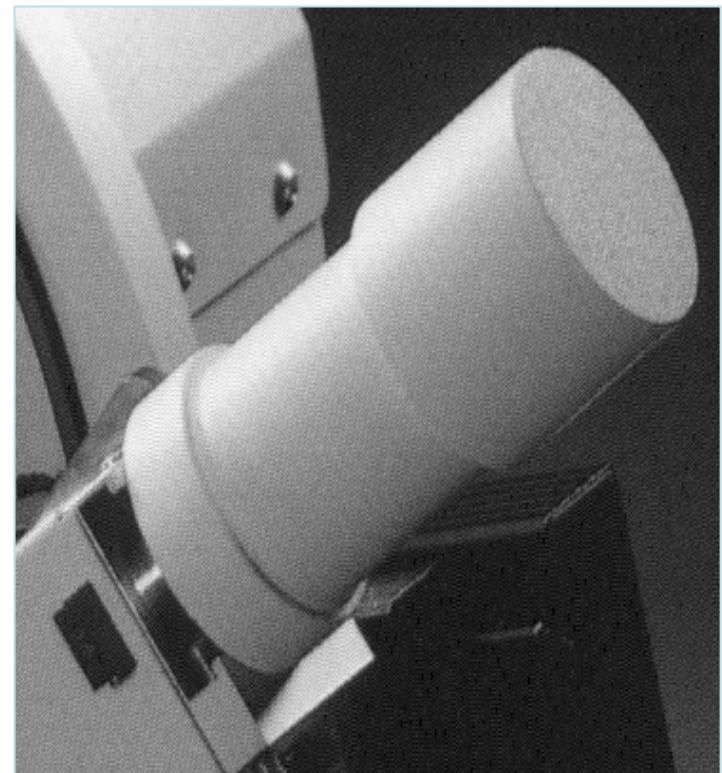

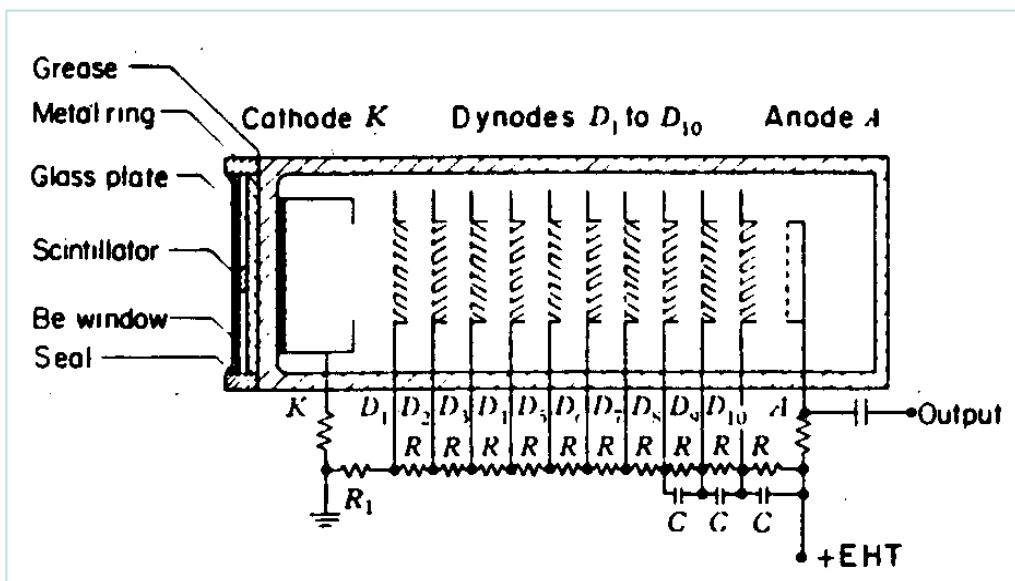

## D8 ADVANCE: Instrumentatie (8) Detectori

### Contor cu scintilatie

Model:

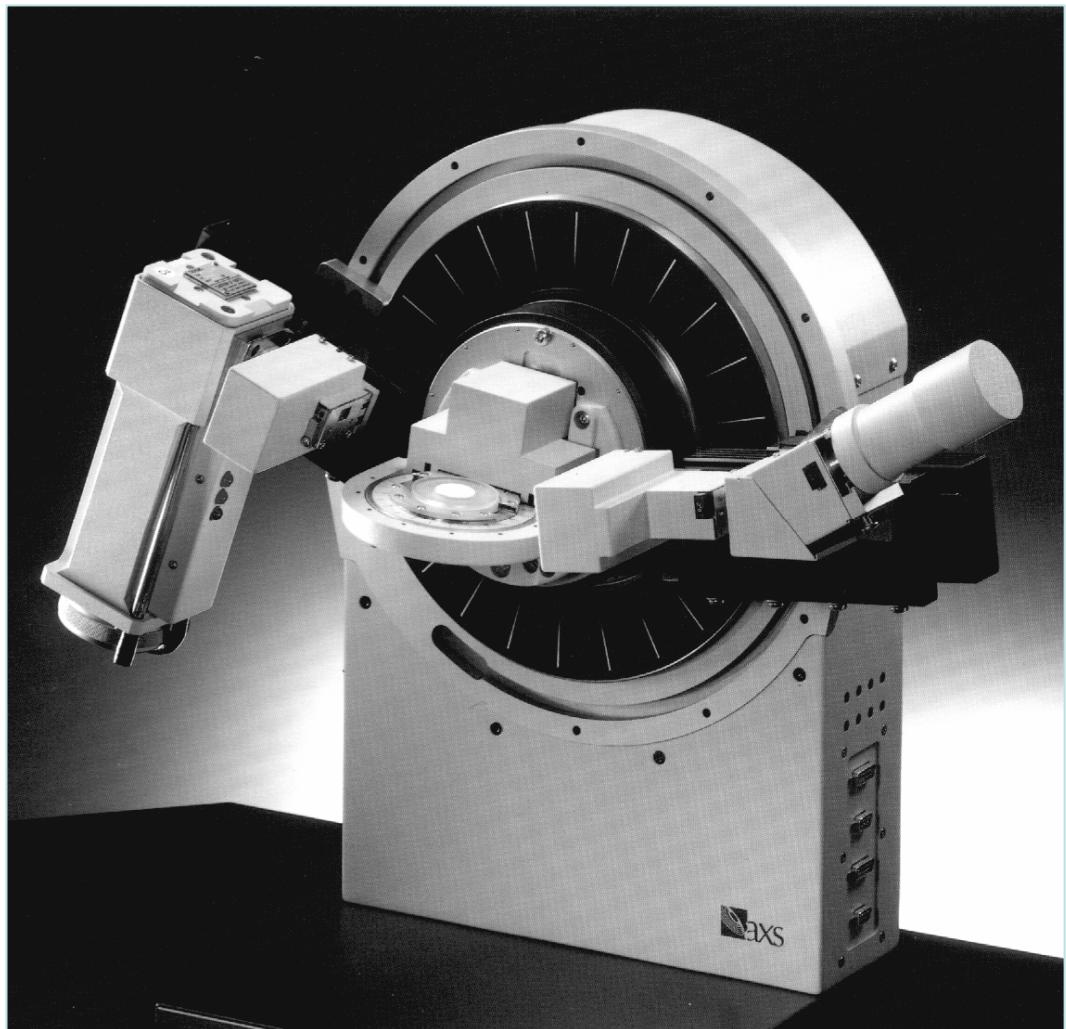

scintilator in UV + fotomultiplicator

## Metode de analiza (2)

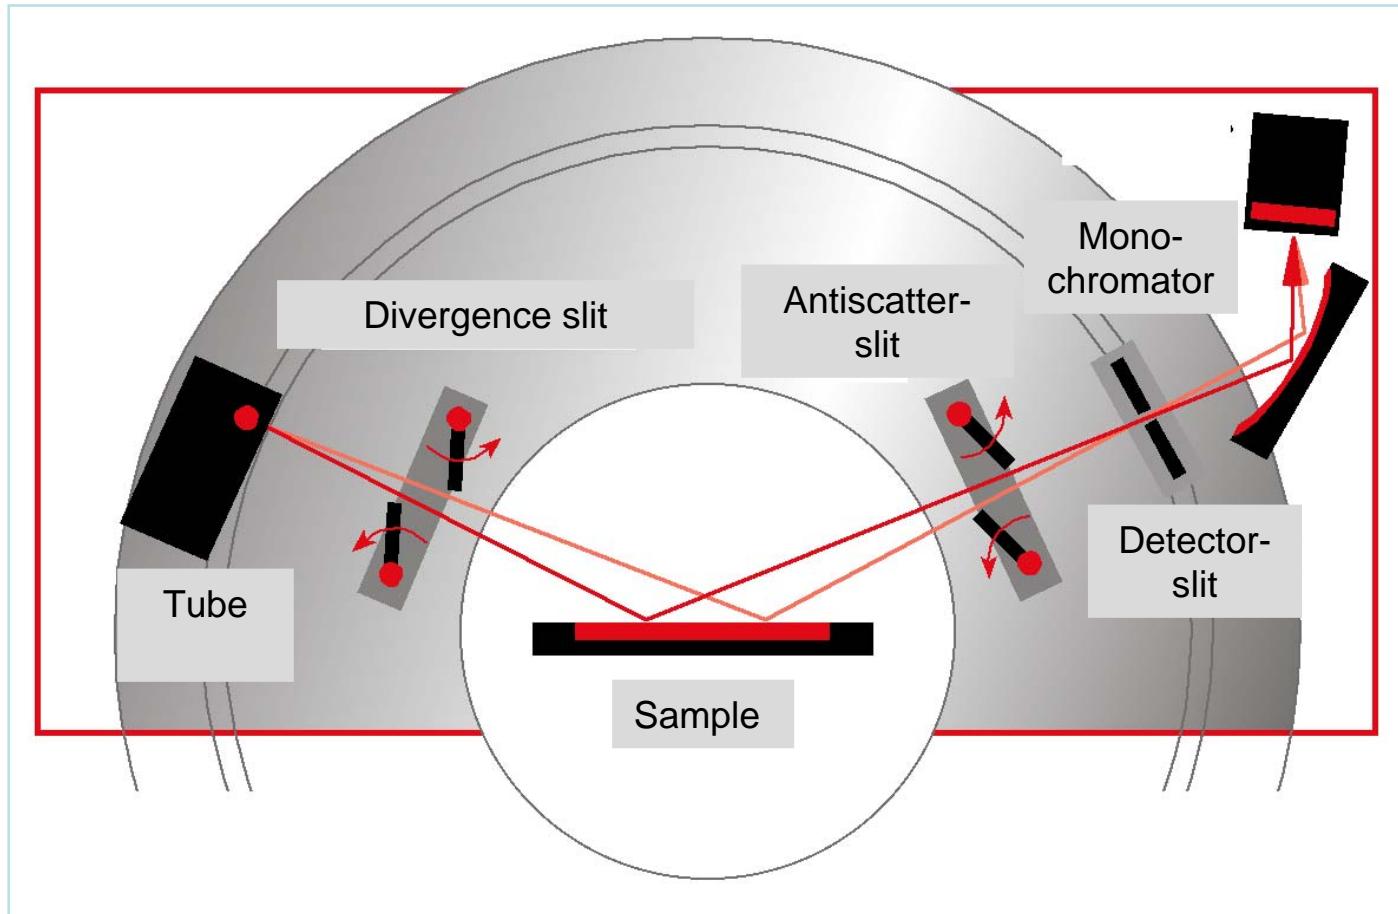

- Bragg-Bretano
- Fascicul Paralel: Oglinda Gobel
- Camera de temperatura
- Reflectometrie

cerc difractometric variabil

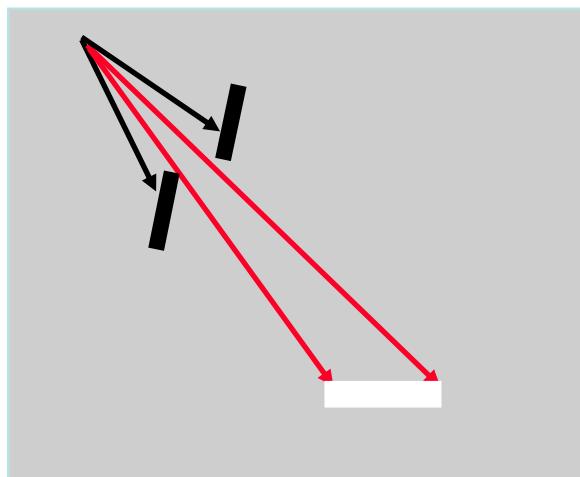

## Metode de analiza (3)

### Montaj Bragg-Brentano: principiu

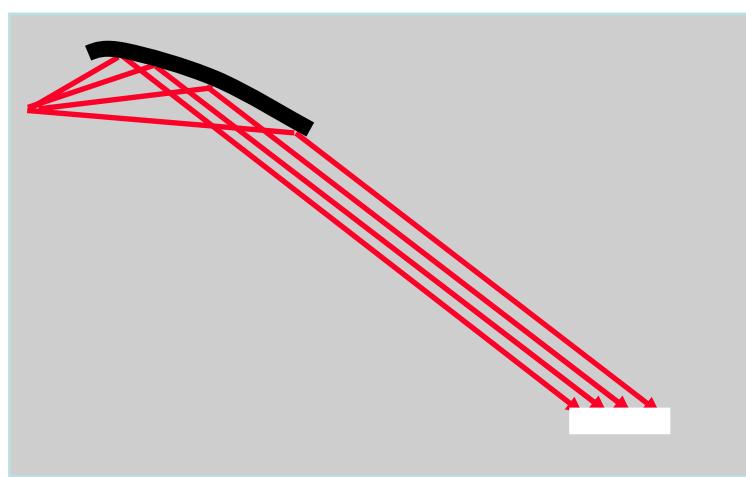

## Metode de analiza (4)

Comparatie intre geometriile Bragg-Brentano si “paralel”

Fascicul divergent

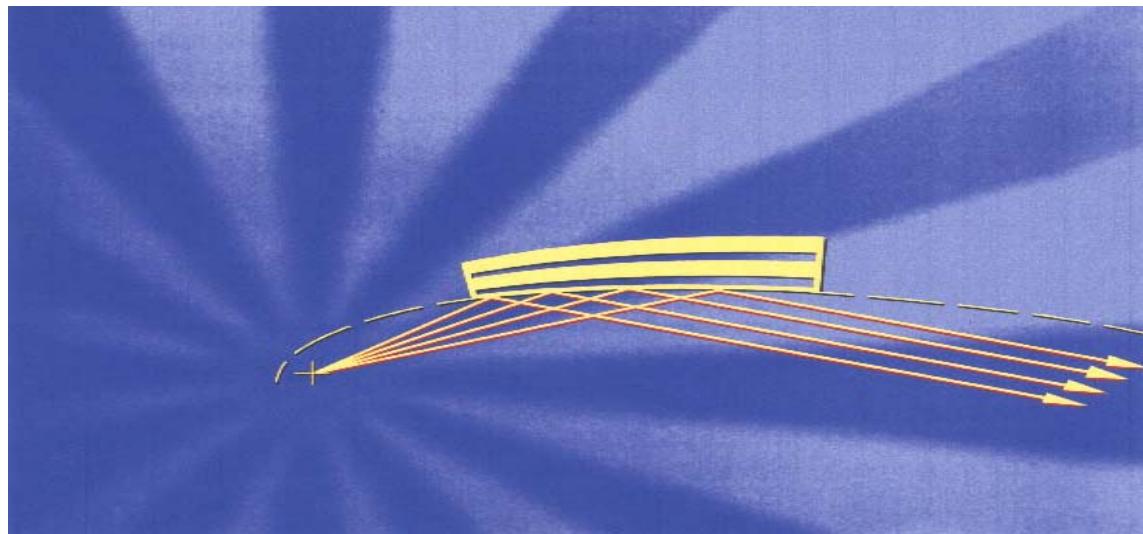

Fascicul paralel

## Metode de analiza (5)

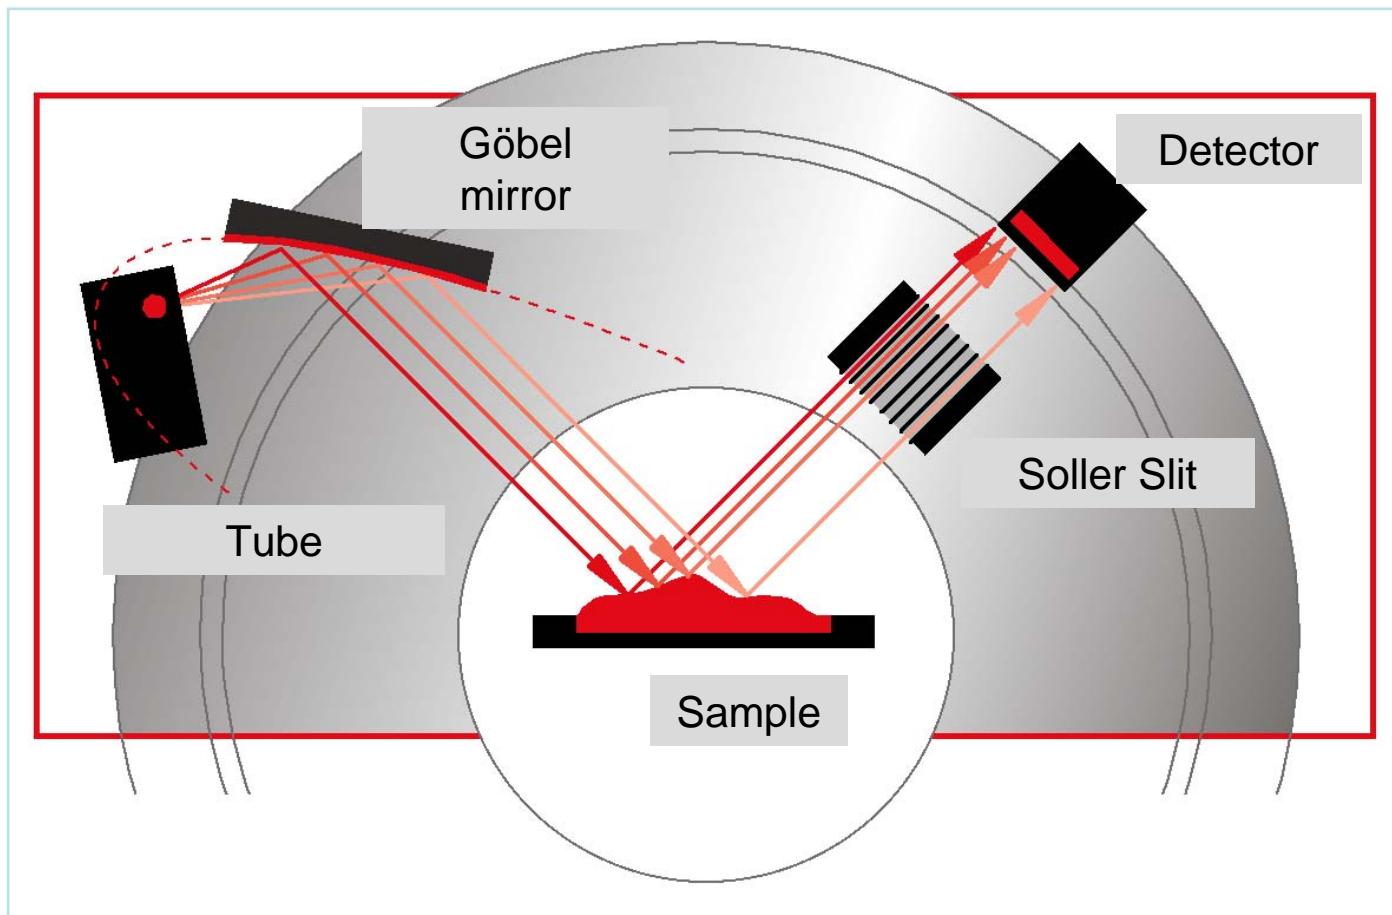

### Göbel Mirrors

- cristal curb multistrat
- capteaza radiatiile X de la sursa intr-un unghi solid larg
- produce un fascicul paralel si intens (?!?) fara radiatii Cu K $\beta$

## Metode de analiza (6)

### Principiul geometriei cu fascicul paralel (Göbel mirror)

## Metode de analiza (7)

### Posibilitati tehnice de inregistrare a datelor:

- ✓ cercul difractometric: 150, 250 370 mm, independent
- ✓ miscare / stationare independenta a tubului si contorului
- ✓ auto-calibrare automata inaintea fiecarei probe
- ✓ pozitionare automata la unghiurile de plecare
- ✓  $2\theta$  mimin =  $0,5^\circ$ ;  $2\theta$  maxim =  $160^\circ$  (functie de fante si proba)
- ✓ suportul de proba fix, orizontal
- ✓ tipul de inregistrare:  $0 \div 2\theta$ ,  $\theta \div \theta$ , Locked coupled scan, contor scan, tube scan
- ✓ precizie maxima de inregistrare:  $0,0001^\circ$  (cu limitari: temperatura, timp, suprafata, material, etc)
- ✓ ecartul pasului:  $0,001^\circ \div 1^\circ$
- ✓ viteza de inregistrare:  $0,01s \div 10$  min / pas
- ✓ variante de inregistrare: continuu, pas cu pas
- ✓ autoscalarea numarului de impulsuri /s (intensitatea picului)

## Metode de analiza (7): Camera de temperatura

Model: MRI / TC-Wide Range

- temperaturi de lucru: -170 °C (vid) / -150 °C (gaz inert) ÷ 450 °C  
t camera ÷ 1200 °C
- termocuplu: K cromel/alumer, Pt-PtRh
- etaloane pentru: aliniere goniometru, temperatura
- mediul de lucru: aer, vid, gaz inert
- ferestre: kapron

**Important!**

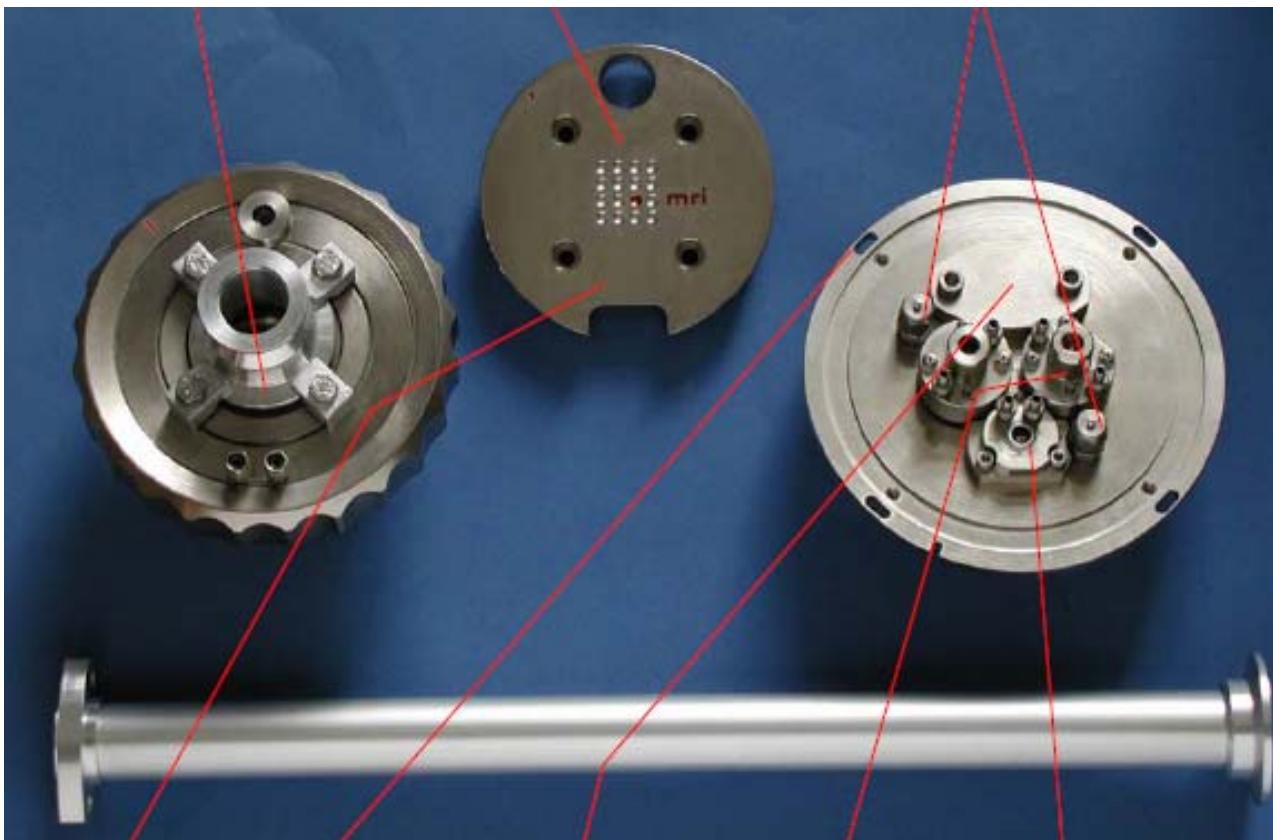

Este montata o data la cateva luni

## Metode de analiza (8): Camera de temperatura

Accesorii:

pompa vid  
vas Dewar azot lichid,  
sistem racire / incalzire cu apa  
sistem de vizualizare in interiorul camerei  
joja si sistem de masurare a vidului,  
controler si regulator de temperatura, cu precizie 1 °C , comandate manual sau prin soft  
sisteme de protectie automata  
posibilitatea de a programa “job-uri” pentru proble foarte lungi

## Metode de analiza (8): Camera de temperatura

Suport proba:  $10 \times 10 \times 0,7$  mm

**Probleme de aliniere in planul de zero:  
cu dilatari / contractii, cu topirea**

## Prepararea probelor (1):

### Intrebari:

- de ce este important de discutat de prepararea probelor?
- ce fel de metode de masurare de foloseste
- care sunt diferitele posibilitati de a prepara probele si avantajele diverselor metode?

**Prepararea probei este principalul motiv pentru erorile sistematice in difractometrie**

### Principalele erori sunt::

- **inaltimea probei:** afecteaza valoarile  $d$  – distantele interplanare si intensitatile picurilor  
⇒ rezultate eronate in analiza calitativa si cantitativa de faza, indexarea parametrilor retelei cristaline
- **orientarea preferentiala (in cazul probelor cu aspect de ace sau foite):** afecteaza intensitatea  
⇒ rezultate eronate in analiza calitativa si cantitativa de faza, prelucrarea Rietveld
- **marimea nepotrivita a granulatiei:** efecte de absorbtie, orientare preferata, probe neomogene  
⇒ rezultate eronate in analiza calitativa si cantitativa de faza, prelucrarea Rietveld
- **compozitia granulometrica:** poate distruge cristalinitatea  
⇒ rezultate eronate in analiza cantitativa de faza, prelucrarea Rietveld, determinarea dimensiunilor cristalitelor, grosimea picului la semi-inaltime

## Prepararea probelor (2):

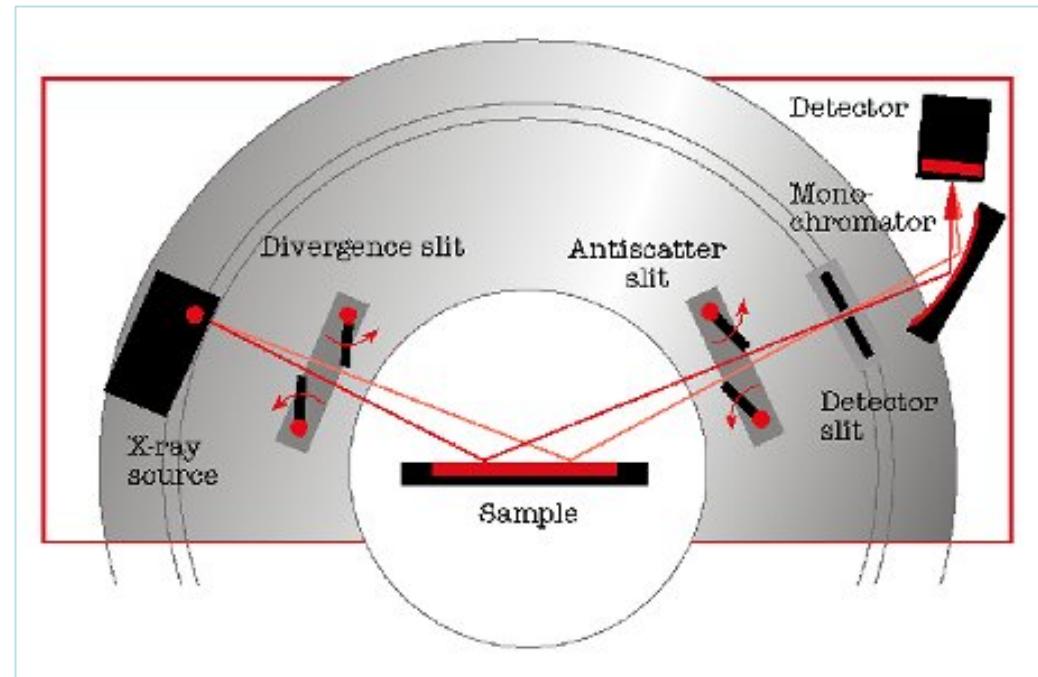

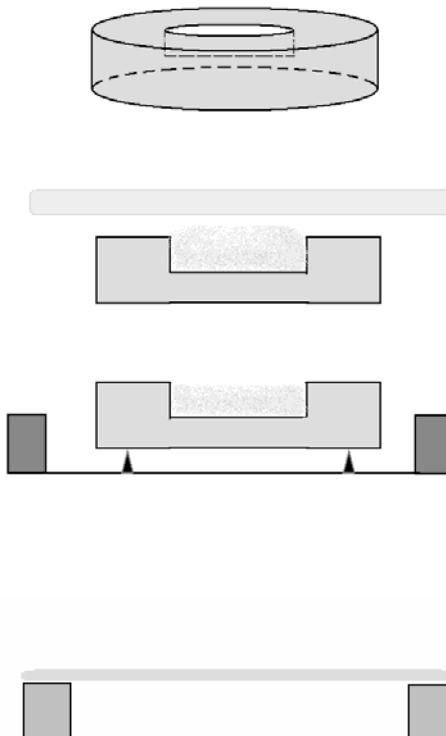

**IMPORTANT: nu se consuma din material**

**Tipuri de probe:**

lichide, geluri

solide: pulberi, folii, placi cu o suprafață dreaptă ( $\leq 30 \times 30$  mm)

fibre, fire

## **Prepararea probelor (3):**

### **Suporturi de probe pentru montaj prin reflexie:**

- prin fata suportului de proba
- prin spatele suportului
- prin lateral
- folosint suporturi de probe cu fond zero
- alte metode de preparare: presare, sprayere, scotch aditiv, etc.

#### **Dimensiuni suporturi alama:**

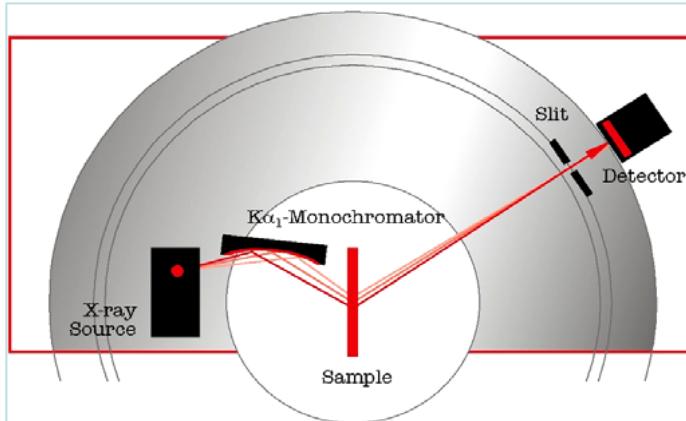

$\Phi 25 \text{ mm} \times 0,5; 1,0; 2,0 \text{ mm}$

$\Phi 15 \text{ mm} \times 0,5; 1,0; 2,0 \text{ mm}$

#### **Dimensiuni pastila (matrita presa hidraulica 10 tf):**

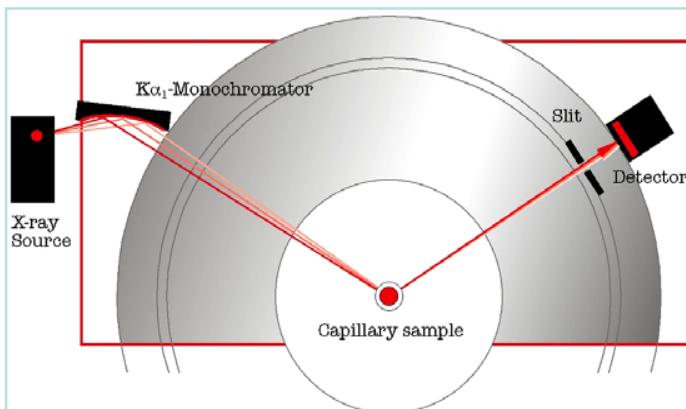

$\Phi 11 \text{ mm} \times 0,5 \div 2,0 \text{ mm}$

## Prepararea probelor (4):

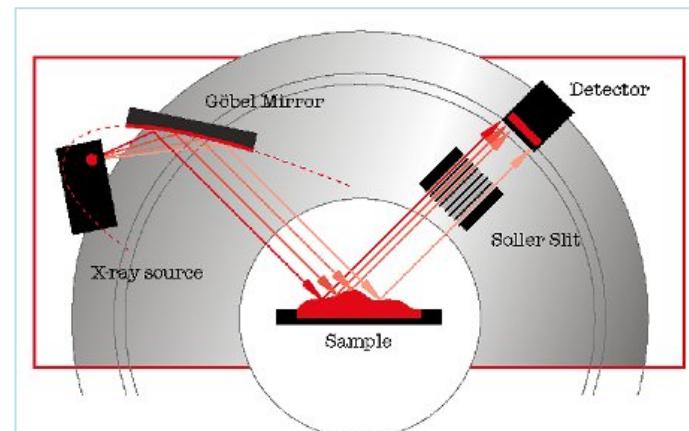

Suporturi de probe pentru montaj prin reflexie:

intre folii  
pe folii  
fibre

in capilare  
pe capilare  
pe fibre

Oglinda Göbel:  
probe denivelate, care nu pot fi distruse

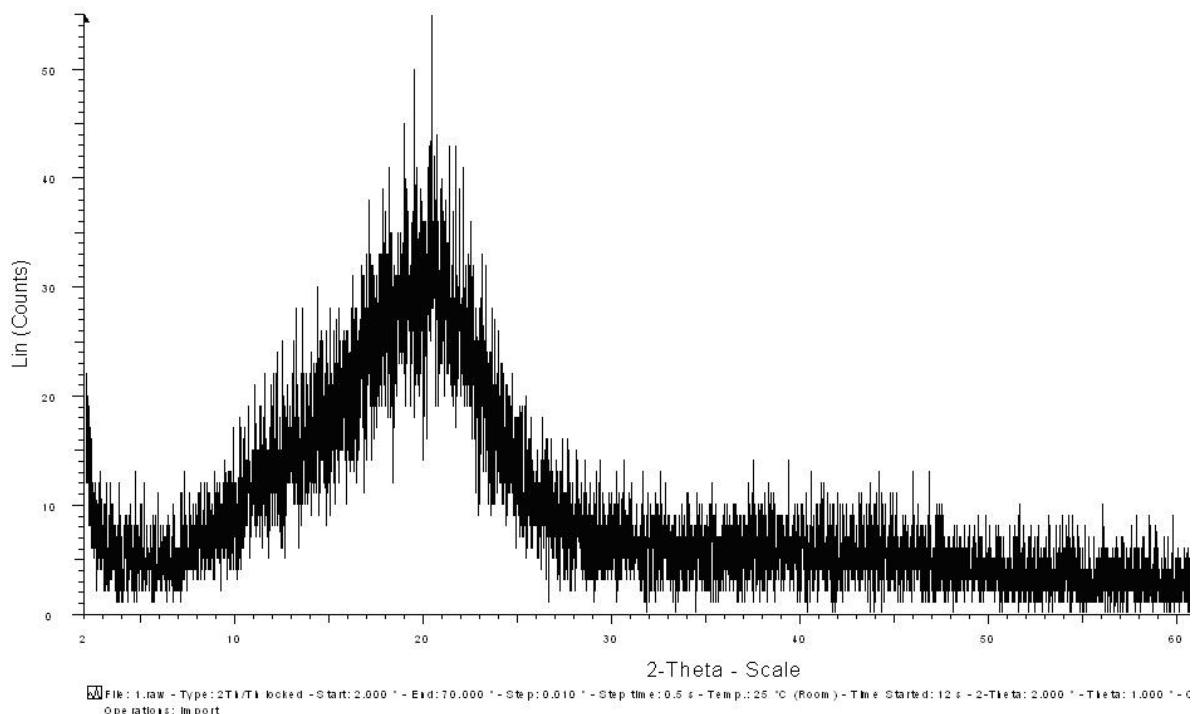

## Preluarea rezultatelor (1):

formate brute:

**fisier.raw**

**fisier.txt**

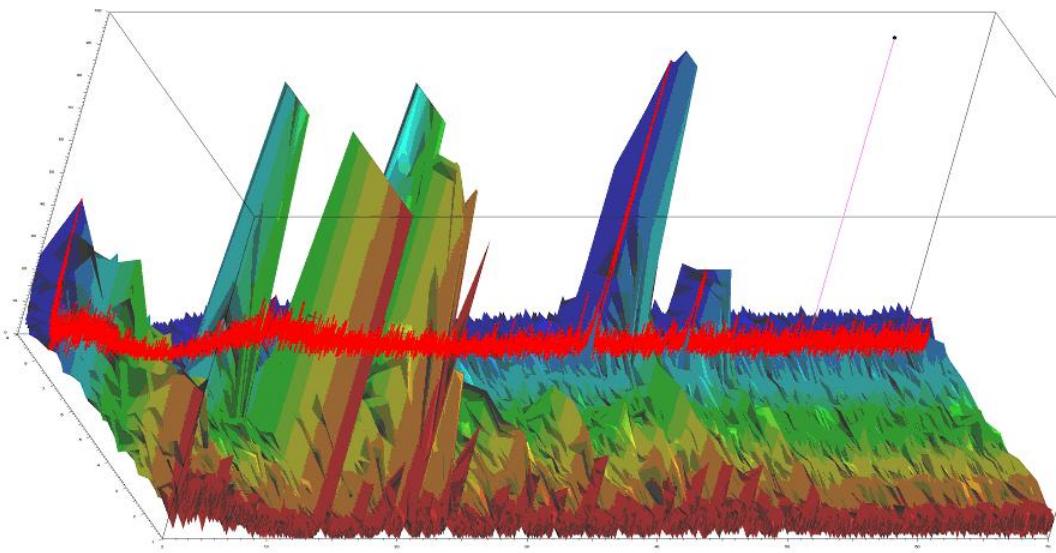

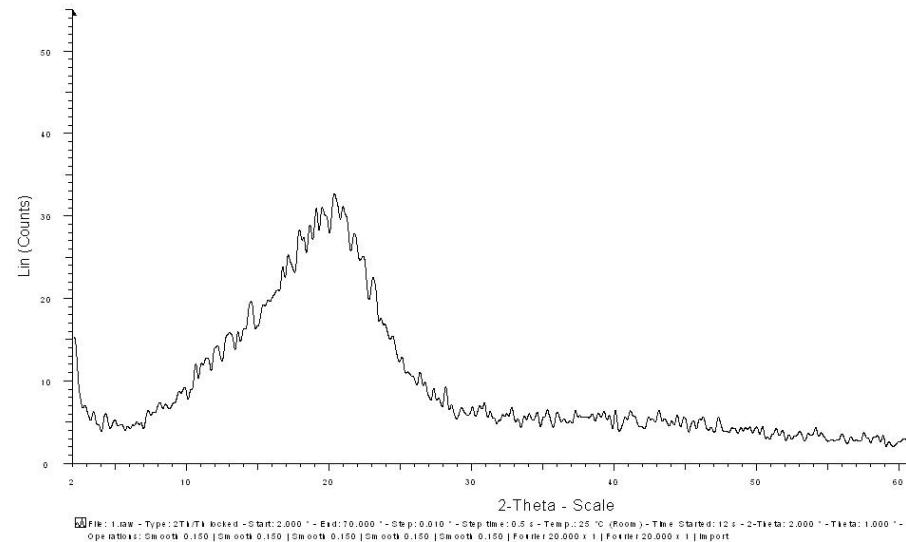

**fisier.wmf (32 bits)**

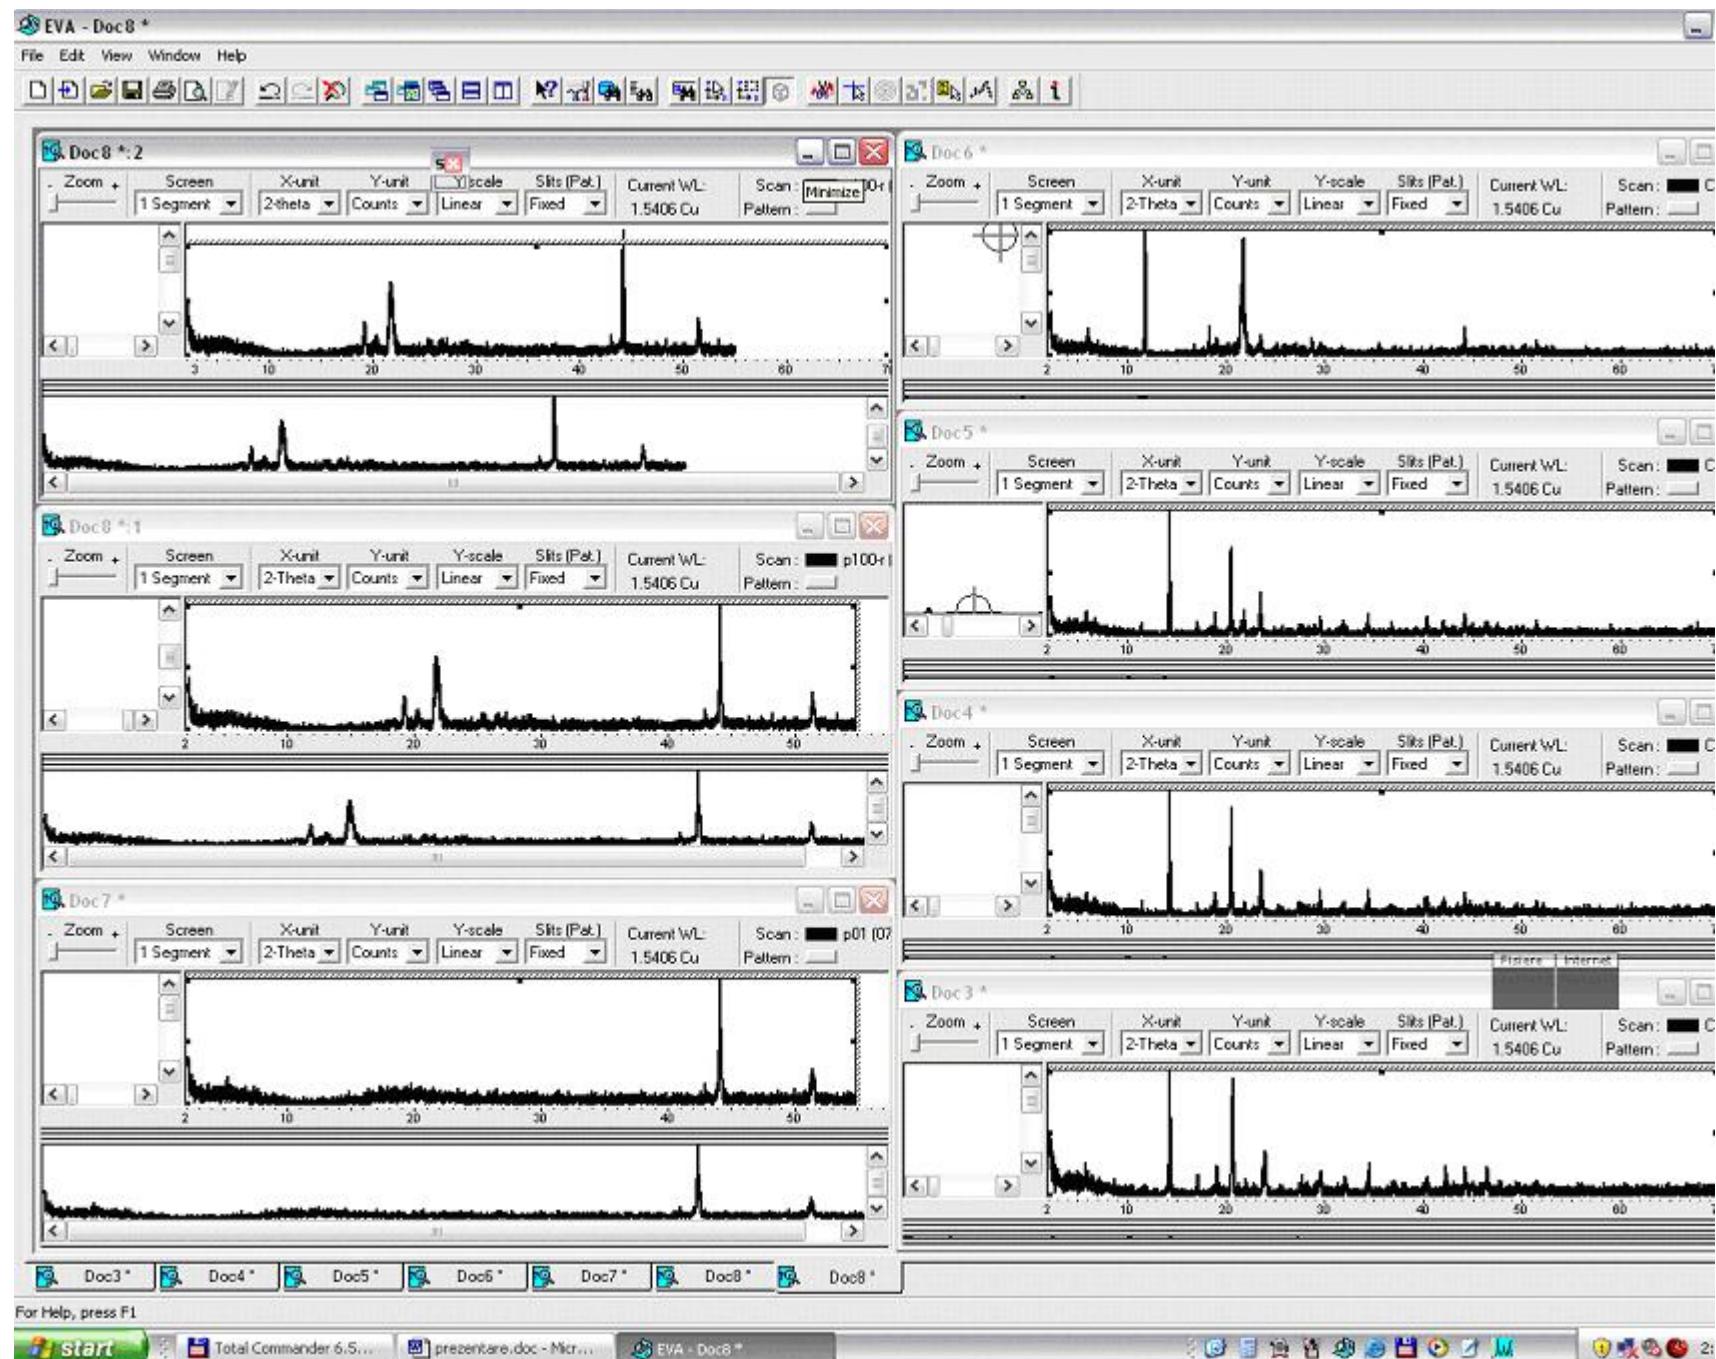

## **Preluarea rezultatelor (2):**

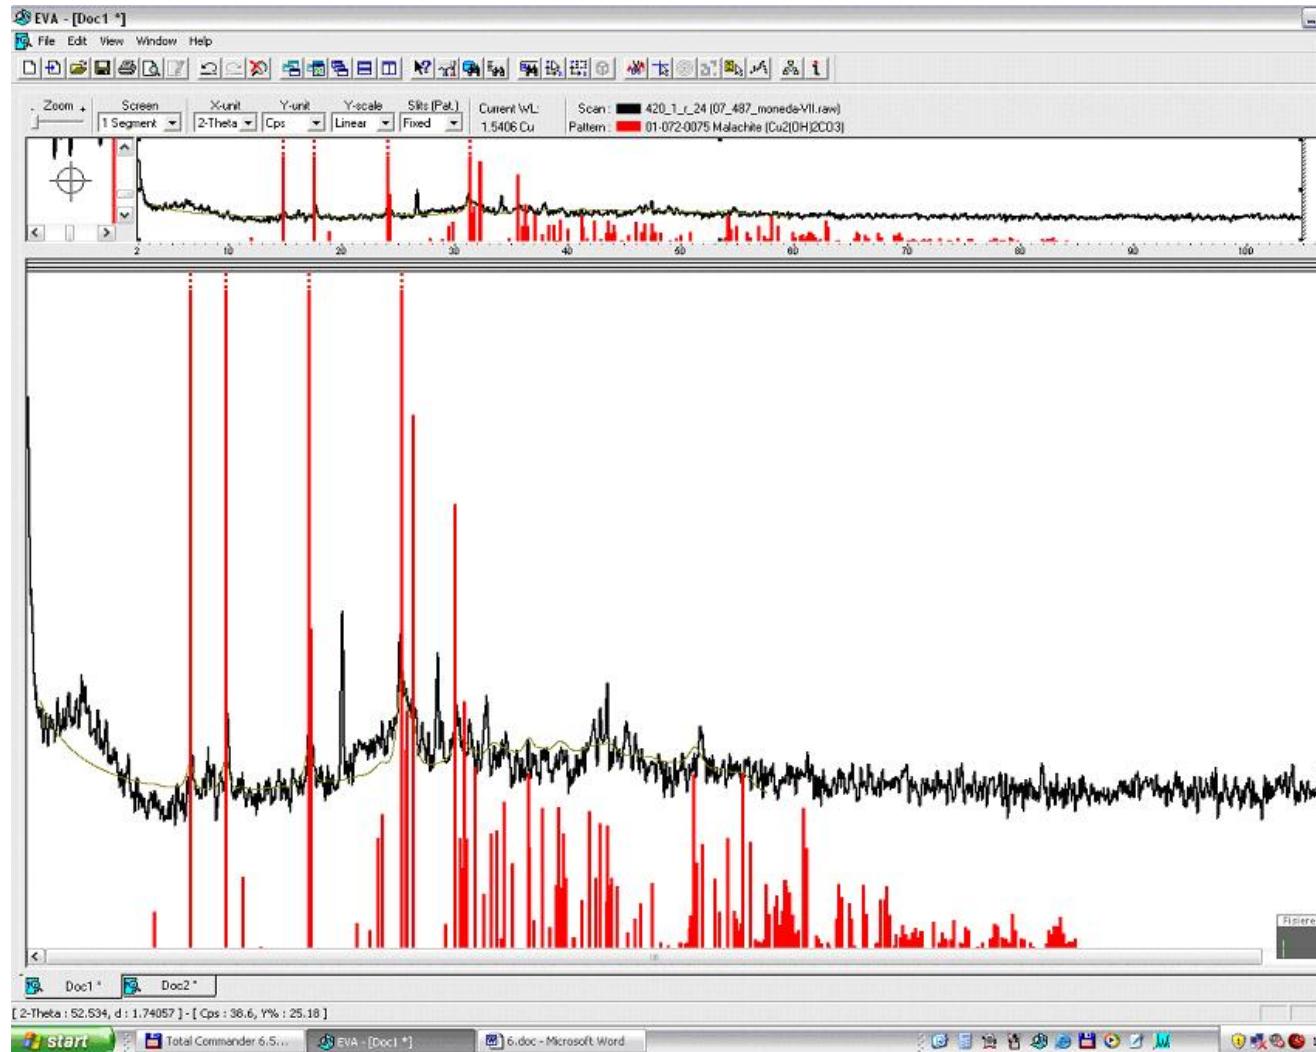

## **formate prelucrate:**

**difractogramme multiple  
filtrari Fourier cu grade diferite  
fisiere Origin simple, multiple  
reprezentari grafice, filtrari diverse**

## Preluarea rezultatelor (4):

## Preluarea rezultatelor (5):
